Ribs thru 18: All

Belly Lifts

Psoas Release:

Hips: R

Ischium/Ilium: R

SI Joint- Sore

Tail Pull

Butt Tuck

Belly Lift and Holds

Closed Down Session w/ 2 Bladder Meridian Sweeps, Both Sides.

Case Study

Disclaimer This is not a diagnosis or meant to replace your regular veterinarian or chiropractic care.

If this were my horse, these are the actions I would take for optimal results:

- **3 days of no under-saddle work post 1st Bodywork session, hand walks and gentle large circle lunging are good if you must. Plus yoga poses each of those days.**
- **30 days straight of Horse Yoga Poses, best if done pre and post rides after under-saddle work resumes. <https://youtu.be/PKEL-aHCDsE>**
- **Bladder Sweeps 3x each side before/after Yoga and/or a ride or in any stressful situation that may arise (travel, colic, etc)**
- **Daily shoulder/wither lifts on the 1 side (L or R, not both) as noted above, until your horse get their next trim/shoeing (best to do this just before farrier works on them).**
- **Apply 10 drops of NCD2 1 x day until bottle/s are gone, directly into their mouth or in a hollowed out carrot. Very import to give them before and after vaccinations, chemical dewormers, and other prescribed drugs.
https://youtu.be/Xw9D_CujB3A**
- **Apply Trace Minerals to replenish minerals, use as a natural dewormer (copper), anti-bacterial/anti-viral for internal issues 3 droppers full on wet mash for 10 days. Externally can be used to push out infection on wounds for quicker healing.**

Case Study

- **Apply Miracle Spray directly into their mouth or on top of food as long as they show interest to sooth digestion issues and boost immune system and/or their coronet bands, outer hooves, and under hooves/ frogs (imagine a whole hoof soak but it's sprayed on instead of sitting in a soak).**
- **Apply Release Spray as needed on tight areas (head, whither, hind end, etc.), to reduce bruising, trauma, and/or over horse, or into mouth just to calm or relax them. Good tool if colicing.**
- **Apply Balm generously to arthritic knees and other Calcifications like Sidebone etc. See video for more instructions. Can also reduce old scar tissue.**
